

CUSTOMISED PRODUCTS Product Catalogue

Manufacturer / Wholeseller/ Distributor

FIT-RIGHT makes your life organised and easy with its expertise in the field of racking and storage systems, our core focus is Developing and manufacturing quality components/ products used in storage systems and allied industries.

OUR CAPABILITIES :

MANUFACTURING :

- Best in class manufacturing technology deployment that includes Multiple Roll Forming lines to form various components .
- Automated Powder Coating line and Semi automated Welding Automation systems.
- We have one of the largest manufacturing capacity in India with high flexibility and capability to execute large projects and offer customised solutions as per the needs of the customers in domestics as well as international markets.
- We have the capability to powder coat single piece up to 12 meters in length, which is the best offer in this part of the world.

QUALITY ASSURANCE :

- The raw material used for the manufacturing is subjected to sample test as per plan to ensure that the same is as per requirement. This is over and above the test certificates, which are provided by the steel manufacturer.
- The steel used is certified for its chemical composition by respective chemical analysis and the mechanical properties like yield-strength by standard physical testing methods.
- The powder meant for finish is tested for its chemical and physical properties for every batch.
- The fasteners also undergo random sampling tests for its dimensions.
- We have well established in-process and final quality test methods to ensure that all the products manufactured as per Highest quality standards which is benchmarked with International offerings.
- These components, which are manufactured to exacting standards and are finished with superior finish are packed properly for road/rail worthy packing, and are carefully transported to avoid transit damages of the products and reach site in factory condition & good quality.

DESIGN EXCELLENCE:

- Our Design capability with global benchmarks provide efficient as well as customised solutions for all customer applications utilising advance technologies, knowledge base and understanding of industry applications.
- All our components are designed to the best quality standards conforming to the current Indian Standards and are also in line with the guidelines/standards enumerated in RMI and SEMA
- Our solutions are also tested through FEA for structural rigidity and safety thus producing designs, which are safe and efficient. Our design analysis and development activities are well supported by advanced software packages like, ANSYS, IDEAS, SOLID WORKS and AUTO-CAD .
- Continuous Product improvements and new product development utilising exclusive prototyping facilities and academic industry partnerships makes us a unique player in this field with an ability to cater to wider spectrum of industries and applications.

REACH & DISTRIBUTION:

The guiding principle at FIT-RIGHT is customer service and all our efforts are directed towards achieving highest standards of the same. Our products are backed by a very strong company sales and service establishments throughout the country as well as in strategic export markets.

FIT-RIGHT has been delivering storage racks, warehousing solutions and material handling solutions to various DEALERS/ MANUFACTURERS / TRADERS across India. We design, manufacture, deliver, provide after sales service and support for all the products delivered.

The map and the statistics below show the reach FIT-RIGHT has achieved in the respective states in the last 5 year and growing .

OTHER CUSTOMISED PRODUCTS

MOBILE COMPACTOR SYSTEM

Our clients appreciate our Mobile Compactor/ Optimiser for their high density storage capability & floor utilisation aptitude. We provide this compactor system with flexible control & manifold cabinets. The colour, design, pattern, size & dimensions of this system can be modified as per the space availability & client requirements. We offer this system at reasonable prices for our clients. Further, we assist clients while the installation process & guide them to maintain the storage system.

FEATURES :

- High quality
- Strongly built
- Reliable performance
- Minimum maintenance
- High load bearing capacity
- Different colour options available
- Can be made in a number of combinations

2 Fixed shelf units, 11 Movable shelf units

ADVANTAGES :

- It is a Racking System, can be moved on Wheels which Permits Optimum Use of Space over a Conventional Storage in fixed shelving units.
- It is an Innovative & Versatile Design, Having Sections of High Storage Capacity with a Variety of Storage Types.
- System having Design Features Define the Stability, Rigidity, Flexibility, Safety and Ease of Assembly.
- Saves Space & Create Additional Storage Capacity.
- Direct Access to each & every Stored Level.
- Are Easy to Operate and Can Store Different Types of Items.
- Permit Effective use in Offices, Workshops & Warehouses.

MULTI TIER RACKING SYSTEM

Multi tier racks are manufactured as per the set industry standard and using quality raw material. These systems are mainly used in offices/ factory/ warehouses to optimise the vertical space available of the area.

Multi tier racks can be offered with the variety of options in size and colour. **These kind of systems are generally made out of slotted angles considering its is a highly flexible products.** Multi-tier rack can also be made using pallet racks, medium duty racks, long span shelving racks, slotted angles frameworks racks etc.

Multi tier racks are made as per customer need and specification.

MEZZANINE FLOOR SYSTEM

mezzanine floor is a unique, space saving, economical storage solution available which is used widely by every industry.

mezzanine Floor is a flexible system made out of heavy duty Flexible Components & nuts and bolts. Being conventional bolting systems, it is easy to assemble, extent, shift the installed structure in no time.

A mezzanine floor is used to optimise vertical height which normally goes waste. These can take a load of 100 Kgs to 5000 Kgs per sq.mtr.

Mezzanine floor are tailor made as per customers need and specifications with the increasing property prices this is a best solution to create space within space.

There are different types of mezzanine floors available with us that we can customise:

- (1) Standard Mezzanine Floor /
- (2) Heavy Duty Mezzanine Floor
- (3) Multi-Tier Mezzanine floor
- (4) Rack Supported Mezzanine Floor

The mezzanine floor can be made with a wide range of components & flooring, from metal deck flooring to Plywood Flooring to composite Deck Flooring we have all types of solutions to fulfil your requirement.

Standard

Point load

CANTILEVER RACKING SYSTEM

Cantilever Storage Racks are perfect to organise a lumber yard, warehouse or manufacturing facility. The racks are particularly designed to store pipes, round bars, angles, channels, square bars and many more.

The racks mostly comprise of columns with a vertical beam and one or two horizontal beams at the base to offer stability. A series of arms is fastened on which the load is placed. Load may be handled by hand when they are lightweight or by means of lift trucks or other appropriate lifting systems when heavy things are involved.

FEATURES :

- Everlasting performance
- Durability
- Smooth Working
- Reliable
- Easy installation
- Ideal for Storing long loads
- Super sturdiness
- Minimum maintenance
- High load bearing capacity
- Different colour options available
- Can be made in a number of combinations

ADVANTAGES :

- Ideal For The storage of beams, profiles, pipes, timber, etc.
- Free height adjustment of its arms available
- They are especially useful for storing long, bulky or oddly sized material
- With no front column in the way, these racks are quicker to load and unload, reducing handling time and costs
- easily movable structure as it is modular structure

DRIVE-IN / DRIVE-THRU RACKS

Drive-In racking requires operators to drive into the racking system from one side and remove pallets from the same entry point. Some Drive-In rack systems have a wall or are otherwise closed at the opposite end.

A simple way to identify a Drive-In Rack Systems is its LIFO inventory management. Product is rotated in a Last-In, First-Out inventory manner because of the single entry/exit point.

The draw to a Drive-In rack system is its extremely efficient storage concentration. Pallets are stored back-to-back without aisles for exceptionally dense storage. This style system is an excellent solution for product that is not time or date sensitive, or for fast moving pallets that are rotated frequently

Drive-Thru racking systems are differentiated from Drive-In Systems because they have a separate entry/exit point. With Drive-Thru rack product is rotated in a FIFO method which makes it more suitable for pallets that are date-sensitive. The first pallet loaded on the rail System will be the first pallet removed from the opposite end of the system.

Various styles of Drive-Thru Rack layouts can be adapted to your warehouse space requirements. Unlike Drive-In Rack, Drive Thru Rack will always require an additional aisle which eliminates some pallet locations and creates a less dense storage than Drive-In Rack.

The advantage of a Drive-Thru rack system is the efficient manner of separating loading and picking aisles. Because stock is rotated automatically, pickers do not have to handle pallets more than once and are always assured of picking the first pallet placed in the system. This efficient design can also result in less rack damage as drivers do not have to enter the lanes as frequently for product removal.

Whatever your warehouse space allocation, both Drive-In and Drive-Thru racking can provide extremely dense storage for pallets at a very affordable cost.
